Executive Steering Committee Update

Sample PPTX crafted to stress Markdown extraction from slides

- Operating rhythm redesigned around weekly narrative packs
- Supplier risk watchlist launched in pilot markets
- Source material includes charts, images, tables and callouts

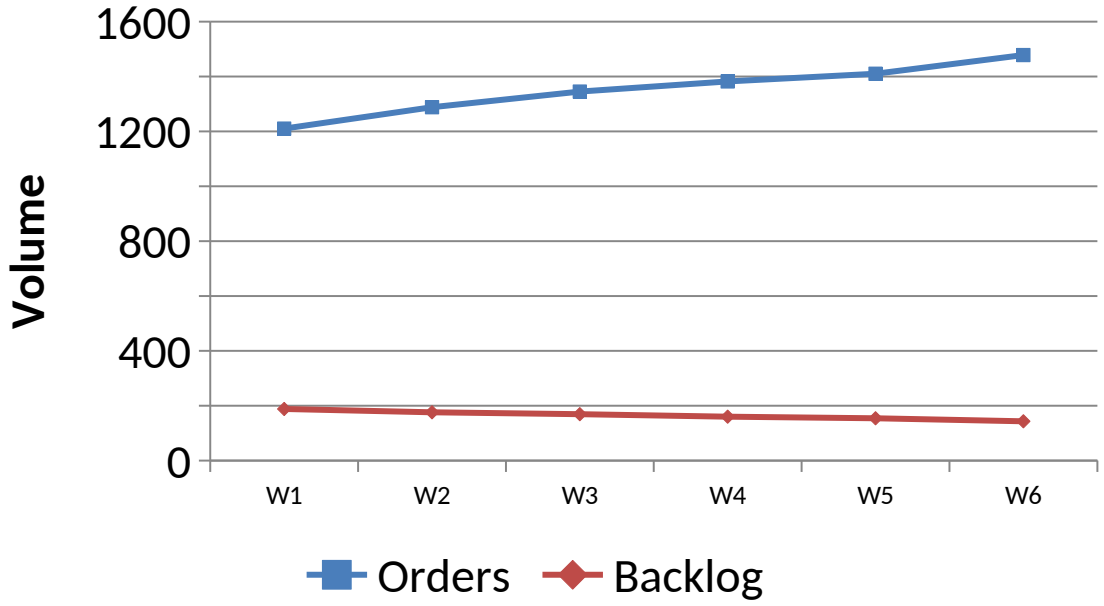
Performance snapshot

The slide mixes native charts, KPI cards and explanatory callouts

On-time shipment
93%
Target 96%

Forecast accuracy
88%
Improved +4pp

Supplier coverage
81%
Gap in packaging



Signal: throughput improved six consecutive weeks.

Implication: backlog is reducing without service quality erosion.

Action: convert the analysis narrative into Markdown for the steering memo.

Architecture and control points

Mixed layout with image, matrix table and milestone band

Layer	Owner	Control objective
Intake	PMO	Ensure source files are versioned and indexed.
Conversion	Automation	Preserve heading hierarchy, tables and captions.
Review	Leadership	Approve narrative and actions before distribution.

Milestones | Scope freeze -> Pilot -> Governance rollout -> KPI audit

Risks and next steps

Intentional combination of bullets, action owners and closing statement

Risk 1: scanned appendices may require OCR fallback.
Risk 2: legacy deck content could flatten semantic hierarchy.
Risk 3: regional variants may duplicate the same narrative with minor edits.
Action: standardise one source package and convert each artifact to Markdown automatically.

Owner	Deliverable
PMO lead	Finalize source inventory and naming rules
Automation lead	Run Docling conversion and quality checks
Executive sponsor	Approve pilot scope and review cadence

Desired test outcome: four distinct source formats -> four clean Markdown outputs in one target directory.
